

ABSTRACT OF THE DISCLOSURE

A bicycle pedal includes a body with an axle rotatably received therein and a rotator is connected on the axle and enclosed by a stator. The body includes two rounded corners in the distal end thereof and each rounded corner has a recessed area and a luminous element is received in the recessed area. The recessed area extends to a side of the body so that the luminous element can be seen from distance from a large range of angles. Two reflectors are connected to two sides of the body.
